

# SoftBI®

The premier Business Intelligence product line for productivity and efficiency analyses, SCC Soft Computer's SoftBI leverages industry leading data visualization software against SCC's LIS Data Warehouse.

SoftBI is a data analytics and visualization application for hospitals and clinical laboratories of all sizes. This business intelligence solution can be used with most LIS or EMR systems, enabling users to integrate administrative data for management reporting, trending, and research. SoftBI also supports activities such as staffing and pricing.

SCC's complete line of business intelligence products will include a full suite of interactive drill-down style reports that provide critical operational data, analytical and statistical data, laboratory efficiency data, various productivity analyses, and other reports involving data from all of SCC's core software products.

## FEATURES AND BENEFITS

**Feature:** SCC Data Warehouse

**Benefit:** SCC has developed powerful data management services and a data warehouse. SoftBI makes data mining across SCC product databases a reality.

**Feature:** SoftBI Designer

**Benefit:** Users can interact with real-time data, change the presentation of information quickly and effectively, and drag and drop data onto reports for lightning-fast reporting.

**Feature:** SoftBI User Portal

**Benefit:** The User Portal provides a modern web interface to supply and manage real-time, dynamic reports for end-users in a familiar format on-demand around the clock. Reports can be edited online and saved for colleagues to view at their convenience. An advanced set of user and group permissions provide only the reports required to those who need them.

**Feature:** SoftLab® Productivity Dashboards

**Benefit:** SCC has prepared report packages specific to laboratory-related business intelligence and productivity optimization to enable users to focus on the decision-making process rather than the finer points of SQL. These laboratory productivity dashboards enable users to identify trends and proactively prevent deficiencies in current processes and workflows. Accurate, up-to-the-minute turnaround time reports are included.

**Feature:** SoftBI-SoftA/R® Reports suite

**Benefit:** Modern billing and accounts receivable departments require a flexible drill-down reports interface and an updated reports suite. The SoftBI-SoftA/R® reports package includes more than 50 financial, laboratory statistics, and operations reports to improve your ability to effectively improve revenue cycle management activities.

**Feature:** Advanced Interactive Reports interface

**Benefit:** SoftBI is an easy-to-use reports visualization tool that fully supports any array of data drill functionality from the SoftBI User Portal by including active link options between prepared reports.

**Feature:** Report Distribution

**Benefit:** Embed reports into internal websites for easy access or enable e-mail distribution on the SoftBI User Portal to send reports on your schedule. All familiar mobile formats are supported.

**Feature:** Ad hoc data mining

**Benefit:** SoftBI uses advanced technology that provides extremely fast access to data with a powerful user interface enabling reports professionals to create meaningful reports with minimal development.

## SAMPLE SCREENSHOTS

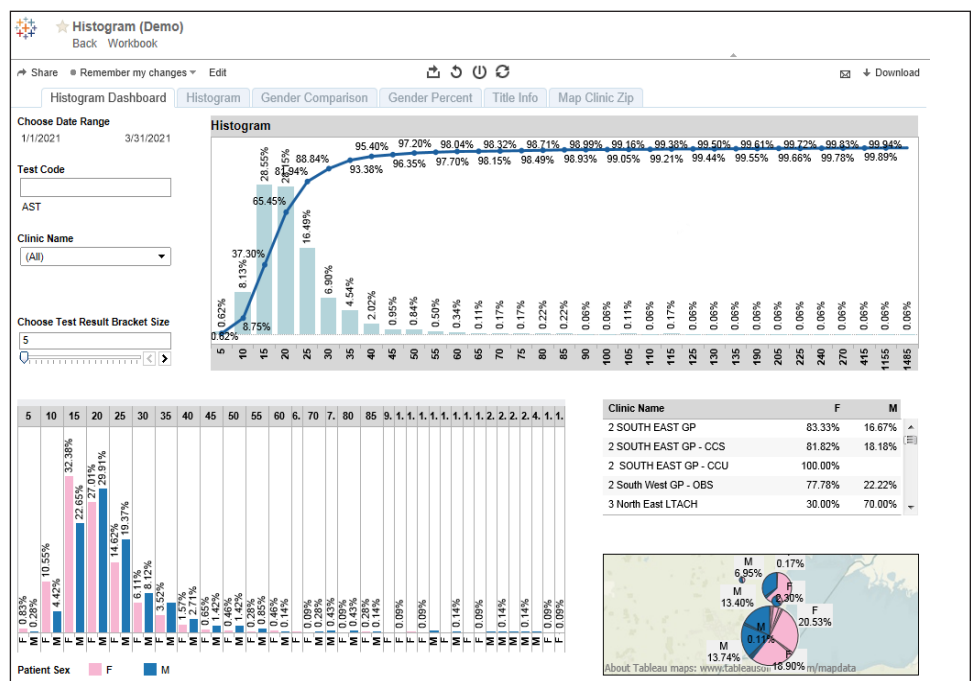

### Test Counts Dashboard - Year to Year Comparison

Standard dashboards include various displays of tests ordered data compared side by side from year to year and month by month. Prepared drill-down reports are standard details supplied with all workbooks.

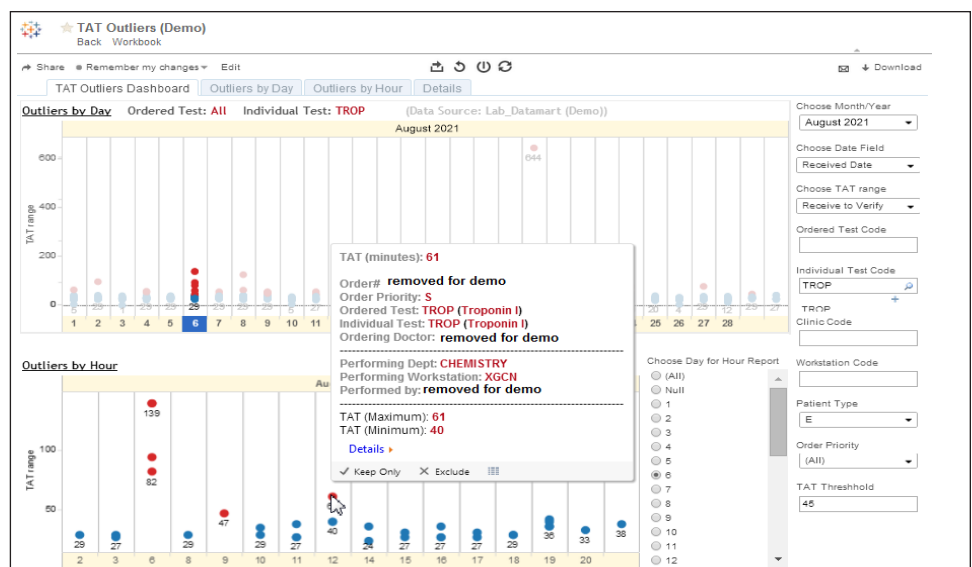

### Histogram Dashboard By Test Code and Patient Gender (User Portal)

SoftBI User Portal view of a Histogram and percentage of results by patient gender for a Selected Test for a given date range with customizable result ranges. This dashboard is customizable with filtering criteria that can be added to the filtering options at top left during implementation.

### Turnaround Time Outlier metadata and drill-down link

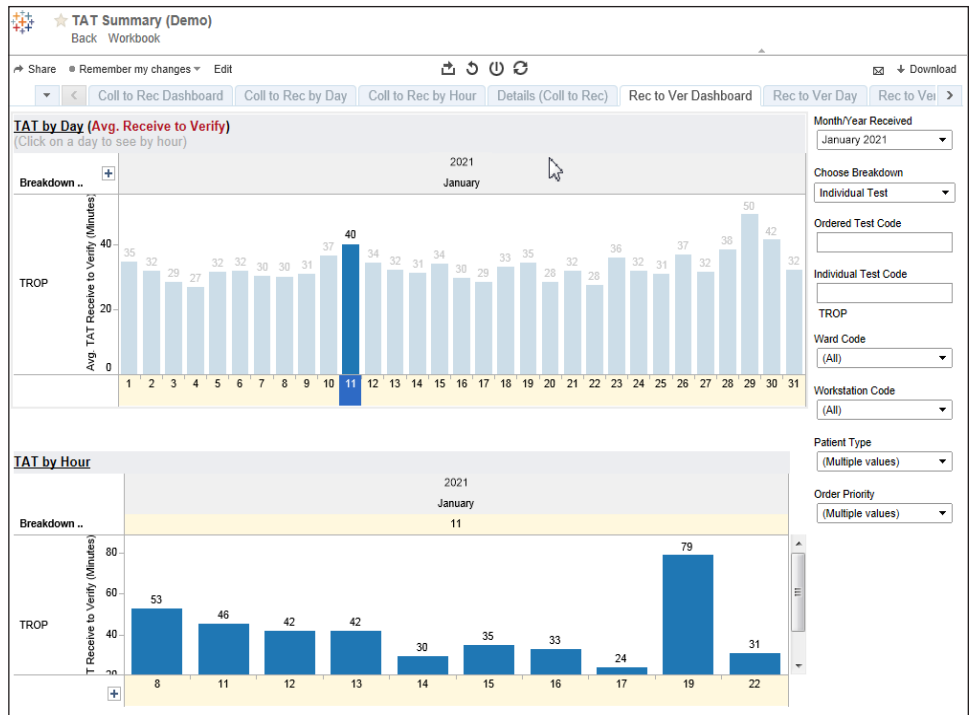

The TAT Dashboard contains detailed information activated by hovering over a specific test in the Outliers by Hour report. Select the Details link to view a crosstab display of the source data.

## SAMPLE SCREENSHOTS

### Received to Verify Turnaround Time Summary

This highly customizable dashboard features dynamic context filters (the lower graph will change depending on the selected date as shown). In this view, TAT by Day for the month of January 2014 with the day of January 11 is selected. The results shown in the TAT by Hour report are for that date.

### A/R Risk Matrix Aging Invoices by Current Payor

The SoftBI-SoftA/R reports suite contains dozens of Financial, Operational, and Laboratory Statistical reports. Shown: SoftBI User Portal view of the Aging Report with total number and dollar amounts of outstanding invoices by current payor.

## SAMPLE SCREENSHOTS

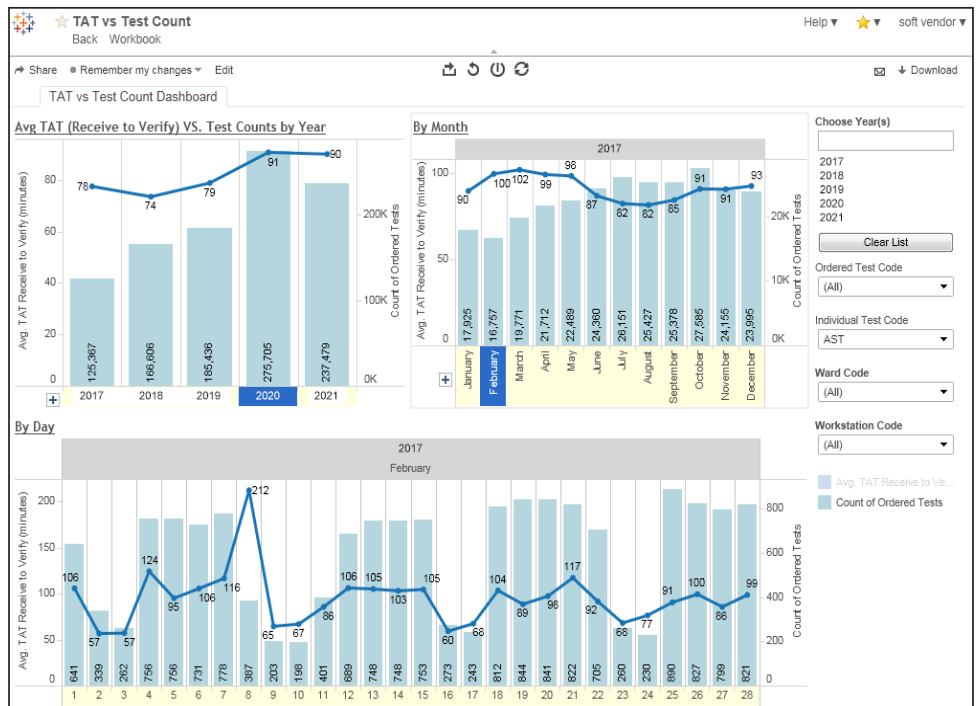

### TAT Trending Scatter Plot

Identify patterns and trends in your turnaround times of specific tests for a range of dates. Do you see the clusters of high turnarounds? The filter criteria displayed are flexible and can be changed interactively on the SoftBI User Portal.

### TAT and Test Count Statistics by Year, Month, and Day

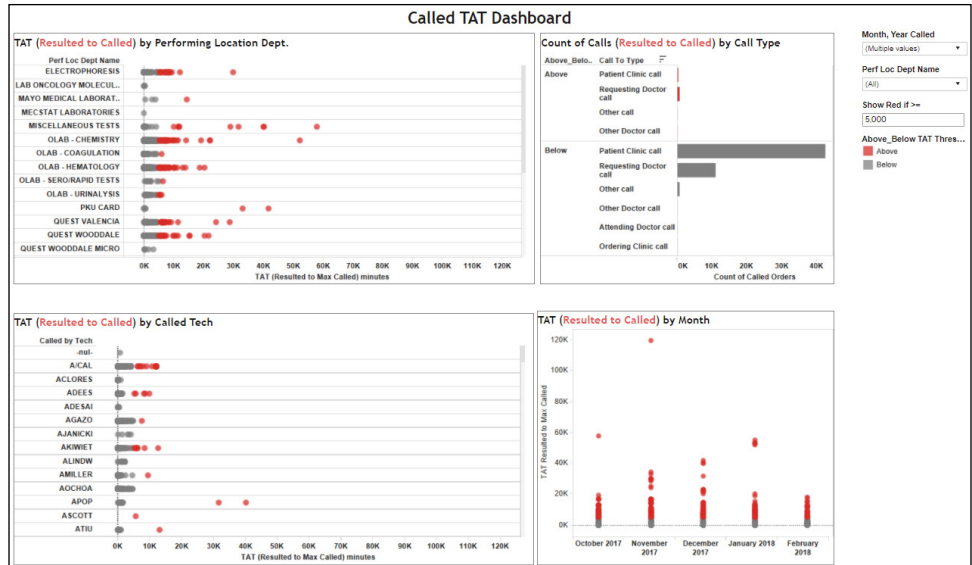

The dashboard shows average turn-around times and total ordered test counts for selected workstations, clinics, and tests by Year, Month, and Day. The dashboard has active point-and-click filters. Simply click the year in the first report on the dashboard to display that year in the turnaround times By Month report. To view the drill-down report, select a month and mouse over the TAT By Day report to view the detailed report in the SoftBI User Portal.

## SAMPLE SCREENSHOTS

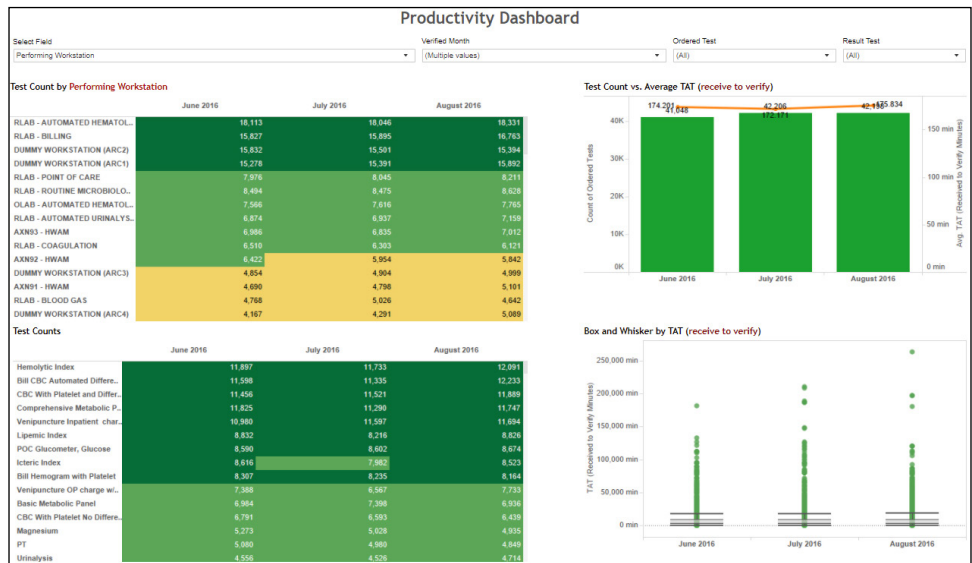

### Called TAT Dashboard

Display statistics related to calling practitioners. See TAT above and below established SLA thresholds for all performing labs, by technician and overall by month. Prepared drill down reports allow various views of underlying data.

### Productivity Dashboard

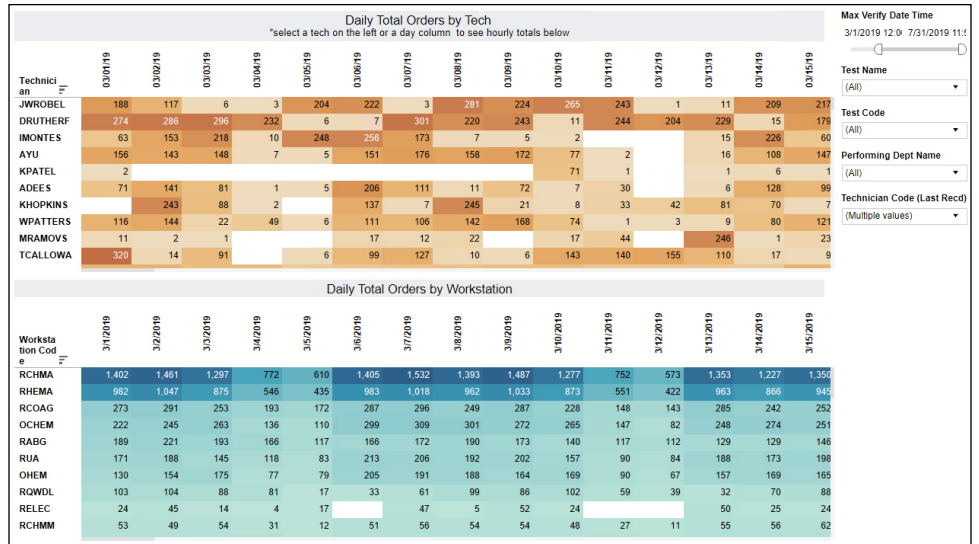

This dynamic template dashboard displays the number of orders, tests, or specimens grouped by selected parameter fields. The standard report allows users to select from showing totals by ten typical fields. This dashboard is easily converted to support any metric such as specimen received, blood products issued, and test counts.

## SAMPLE SCREENSHOTS

### Total Orders Heatmap

View workload for receiving tech and workstation per day. This dashboard is also implemented with various metrics depending on end user specifications. As with all dashboards, this template may include any number of criteria filters in the normalized result datamart.

### Total Ordered Tests by Shift

This interactive dashboard enables users to see the volume of ordered tests processed according to the work shifts the results were verified. The upper dashboard report elements are linked to dynamically filter the lower report using the selected day or shift to show the hourly volume. Criteria filters are included to allow dashboards to become location specific or test specific.
